The invention relates to a novel method for identifying a subject CC predisposed to a disorder associated with ion channel dysfunction. The CC method comprises ascertaining if at least one of the genes encoding ion derived from the subject has any of 134 nucleotide sequences. The method comprises ascertaining if at least one of the genes encoding ion of the invention has nootropic, neuroprotective, inctropic, antipyretic, completely tranquiliser, analysis, neuroprotective, inctropic, antipyretic, completely completely activity. A polynucleotide of the invention acts as an contained agonist, or ion channel antagonist. The methods, isolated con channel agonist, or ion channel antagonist. The methods, isolated conclair activity and contained antagonist. The methods, isolated contained are useful for the diagnosis and treatment of epilepsy and/or a contained periodic paralysis, myotonias, malignant hyperthermia, cardiac arrhythmias, episodic ataxia, migraine, Alzheimer's contained, chronic/acute pain, Bartter's syndrome, polycystic kidney disease, byperinsulinaemic hypoglycaemia of infancy, cystic contained colour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 13; SEQ ID NO 136; 106pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying predisposition to an ion channel dysfunction, such as periodic paralysis, cardiac arrhythmias, migraine, Alzheimer's disease, schizophrenia, anxiety and depression, by detecting encoding-gene

                            RESULT 2
AAE20513
ID AAE2
particularly voltage-gated sodium channel protein.

particularly voltage-gated sodium channel proteins are useful as hybridisation probes for screening libraries and assessing intron/exon boundaries of NHP gene can be used to design primers for use sites, introns that can be used in diagnostics and assessing in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NHP products are useful for drug screening effective in the normal function of MHP in the body, and nucleotide constructs encoding products in vivo. These genetically engineer host cells to express NHP bioreactors in the body delivering a continuous supply of a Nur.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ន្តន្តន្តន្ត្
                                                                                                                                                                                                                          The present sequence is novel human protein (NHP), ior NHP share structural similarity with mammalian sodium
                                                                                                                                                                                                                                                                                               Claim 1; Page 47-50;
                                                                                                                                                                                                                                                                                                              Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
The present sequence is novel human protein (NHP), ion channel protein. MHP share structural similarity with mammallian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NHP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 peptide, or a NHP fusion protein to the body. Nucleotide construct encoding NHP products are also useful in gene therapy for modulating NHP expression and to produce genetically engineered host cells to express NHP products in vivo. NHP nucleotide sequences may also be used as part of ribozyme and/or triple helix sequences that are useful for NHP gene regulation. The NHP polypeptides are useful for generating antibodies, a reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or
                                                                                                                                                                                                                                                                     Claim 1; Page .52-55; 83pp; English.
                                                                                                                                                                                                                                                                                                                         Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Turner CA, Mathur B,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
```

뭉 8

The present sequence is novel human protein (NHP), ior NHP share structural similarity with mammalian sodium

ion channel protein.

channel

proteins

These genetically engineered cells function as bioreactors in the body delivering a continuous supply of a NHP, a NHP peptide, or a NHP fusion protein to the body. Nucleotide construct encoding NHP products are also useful in gene therapy for modulating NHP expression and to produce genetically engineered host cells to express NHP products in vivo. NHP nucleotide sequences may also be used as part of ribozyme and/or triple helix sequences that are useful for NHP gene regulation. The NHP polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for or identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or
                                                              Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
                                                                                                                                                                                                                                                                                                                                                 Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC particularly voltage-gated sodium channel proteins. NHP oligonucleotides CC gene expression patterns. Sequences derived from regions adjacent to the CC intron/exon boundaries of NHP gene can be used to design primers for use CC sites, introns that can be used in diagnostics and pharmacogenomics. NHP CC sites, introns that can be useful for drug screening effective in the CC nucleotide sequences are useful for drug screening effective in the CC normal function of NHP in the body, and nucleotide constructs encoding CC NHP products are useful to genetically engineer host cells to express NHP CC products in vivo. These genetically engineer host cells to express NHP CC products in vivo. These genetically engineered cells function as CC peptide, or a NHP fusion protein to the body. An uncleotide construct encoding NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products in vivo. NHP nucleotide sequences may also be used as part reagents in diagnostic assays, for identifying other cellular gene cc compounds that are useful in the treatment of mental, biological or medical disorders and diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC The present sequence is novel human protein (NHP), ion channel protein. CC NHP share structural similarity with mammalian sodium channel proteins. CC particularly voltage-gated sodium channel proteins. NHP Oligonucleotides consequences are useful as hybridisation probes for screening libraries and assessing consequences derived from regions adjacent to the consequences of the patterns. Sequences derived from regions adjacent to the consequences of the patterns of the patterns within the exons, splice considers introns that can be used in diagnostics and pharmacogenomics. NHP creatment of symptomatic or phenotypic manifestations of perturbing the consequences are useful for drug screening effective in the compound function of NHP in the body, and nucleotide constructs encoding constructs are useful to genetically engineer host cells to express NHP conception, or a NHP fusion protein to the body. Nucleotide constructs encoding NHP products are also useful in gene therapy for modulating NHP products in vivo. These genetically engineered cells incetion as concepting NHP products are also useful in gene therapy for modulating NHP products in vivo. NHP nucleotide sequences may also be used as part regulation. The NHP polypeptides are useful for generating antibodies, as part regulation. The NHP polypeptides are useful for generating antibodies, as compounds that are useful in the treatment of mental, biological or medical disorders and diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the control/exon boundaries of NHP gene can be used to design primers for use cc in amplification assays to detect mutations within the exons, splice cc in amplification assays to detect mutations within the exons, splice creatment of symptomatic or phenotypic manifestations of perturbing the cc treatment of symptomatic or phenotypic manifestations of perturbing the commal function of NHP in the body, and nucleotide constructs encoding the products are useful to genetically engineer host cells to express NHP cc products in vivo. These genetically engineered cells function as continuous supply of a NHP, a NHP concators in the body delivering a continuous supply of a NHP, a NHP concators in the body delivering a continuous supply of a NHP, a NHP concators in the body useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP genession and to produce genetically engineered host cells to express the products in vivo. NHP nucleotide sequences may also be used as part of reagents in diagnostic assays, for identifying other cellular gene cregulation. The NHP penduces are useful for generating antibodies, as compounds that are useful in the treatment of mental, biological or medical disorders and diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The CC method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA of the invention has mootropic, neuroprotective, inotropic, antipyretic, cantinaryatine, antidepressant, antiparkinsonian, antiarrhythmic, antimigratine, antidepressant, antiparkinsonian, and composed comp

The invention relates to a novel method for identifying a subject CC predisposed to a disorder associated with ion channel dysfunction. The CC method comprises ascertaining if at least one of the genes encoding ion CC channel submits (ICS) has undergone a mutation event so that a cDNA CC of the invention has nootropic, neuroprotective, inotropic, antipyretic, containing raine, antidepressant, antiparkinsonian, CC neuroleptic, tranquiliser, analgesic, nephrotropic, antidepressant, antiparkinsonian, CC ophthalmological activity. A polynuclectide of the invention acts as an nucleic acids, polypeptides, antibody, selective agonist, antagonist or contained agonist, or ion channel antagonist. The methods, isolated contained activity. A polynuclectide of the invention acts as an nucleic acids, polypeptides, antibody, selective agonist, antagonist or contained, are useful for the diagnosis and treatment of epilepsy and/or a contained are useful for the diagnosis and treatment of epilepsy and/or a contained paralysis, myotonias, analignant hyperthermia, cardiac arrhythmias, episodic attaxia, migraine, Alzheimer's compastenia, cardiac arrhythmias, episodic attaxia, migraine, Alzheimer's compastion, phobic obsessive symptoms, neuropathic pain, inflammatory compastion, phobic obsessive symptoms, neuropathic pain, inflammatory compastion, phobic obsessive symptoms, neuropathic pain, inflammatory pain, chronic/acute pain, Bartter's syndrome, polycystic kidney disease, control of the printed specification, but was obtained in electronic format directly continuess. The present sequence represents a mutant protein of the printed specification, but was obtained in electronic format directly continues of the cont

cc in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. MHP cc nucleotide sequences are useful for drug screening effective in the treatment of symptomatic or phenotypic manifestations of perturbing the cc normal function of NHP in the body, and nucleotide constructs encoding the products in vivo. These genetically engineer host cells function as the broad delivering a continuous supply of a NHP, a NHP cc peptide, or a NHP fusion protein to the body. Nucleotide construct encoding NHP products are also useful in gene therapy for modulating NHP expression and to produce genetically engineered host cells to express CC NHP products in vivo. NHP nucleotide sequences may also be used as part of ribozyme and/or triple helix sequences that are useful for NHP gene cregulation. The NHP polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene compounds that are useful in the treatment of mental, biological or madical discovered as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
Sequence 1962 AA;
                                                                                                                                                                                                                                                                                                                                                                                                    gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use
                                                                                                                                                                                                                                                                                                                                                                                                                                             particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is novel human protein (NHP), ion channel proteins NHP share structural similarity with mammalian sodium channel proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 37-41; 83pp; English.

                                                                                           cc in amplification assays to detect mutations within the exons, splice nucleotide sequences are useful for drug screening effective in the cc treatment of symptomatic or phenotypic manifestations of perturbing the cc treatment of symptomatic or phenotypic manifestations of perturbing the cc mormal function of NHP in the body, and nucleotide constructs encoding CC NHP products are useful to epentically engineer host cells to express NHP cc products in vivo. These genetically engineered cells function as thoreactors in the body delivering a continuous supply of a NHP, a NHP cc peptide, or a NHP fusion protein to the body. Nucleotide construct encoding NHP products are also useful in gene therapy for modulating NHP ceptide, or a NHP nucleotide sequences may also be used as part cof ribozyme and/or triple helix sequences that are useful for NHP gene cregulation. The NHP polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene compounds that are useful in the treatment of mental, biological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is novel human protein (NHP), ion channel protein. NHP share structural similarity with mammalian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Encoded by MTG"

                                                                                                                                                                                                                                                                                                                                                                 potentially useful as anticonvulsant, antiepileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic motor endplate diseases, hypertension, congestive heart failure and and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The sodium channel polypeptides. The present sequence represents a human sodium channel polypeptides. The present sequence represents a human scannel veriant septice variant septice variant septices and splice variant septices.

The present sequence is novel human protein (NHP), ion channel protein. CC particularly voltage-gated sodium channel proteins. NHP share structural similarity with mammalian sodium channel proteins are useful as hybridisation probes for screening libraries and assessing complete expression patterns. Sequences derived from regions adjacent to the inamplification assays to detect mutations within the exons, splice concludes sequences are useful for drug screening effective in the conclusion of NHP gene can be used to design primers for use sites, introns that can be used in diagnostics and pharmacogenomics. NHP treatment of symptomatic or phenotypic manifestations of perturbing the contrast function of NHP in the body, and nucleotide constructs encoding products are useful to genetically engineer host cells to express NHP concentry in the body delivering a continuous supply of a NHP, a NHP concentry in the body delivering a continuous supply of a NHP, a NHP concentry in the products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP concentry and the products are also useful for generating antibodies, as compounds that are useful for generating antibodies, as products related to NHP and as reagents in departs in diagnostic assays, for identifying other cellular gene compounds that are useful in the treatment of mental, biological or medical disorders and diseases

                                                                                                                                                                                                                                                                                                                       The invention relates to a recombinantly expressed and isolated human SCNIA (sodium channel type I alpha-subunit) (I). (I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antiepileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic epilepsy of infancy, stroke, cardiac arrest, hyperkalemic paralysis, motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human SCNIA splice variant 33P:SCNIADELp671-681 encoding cDNA
Human sodium channel SCN1A protein SEQ ID NO: 2.

The present sequence represents the human sodium channel SCNIA. SCNIA and SCNIA have been located to the human chromosome 2 long arm, positions 2q24 and 2q24-31 respectively. The sodium channel proteins are useful in studying the physiological mechanism in which excitant cells participate and cause human diseases, and in developing remedies for e.g. familial hypercalcaemic periodic paralysis of extremities and motor endplate
                                                                                                                    24-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                     anticonvulsant;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (M1) of determining an CC individual's predisposition to epilepsy and/or development of epilepsy, CC as well as predicting the individual's response to medication. The method CC comprises determining the genotype of at least one gene selected from CC shows a linkage disequilibrium. SCN1a, SCN2A and SCN3A are all sodium CC channel genes located on chromosome 2. The idiopathic generalised cc epilepsy (IGE) gene is more specifically localised on chromosome 2q23. CC SCN1A, SCN2A proteins or genes, are useful for treating epilepsy or SCN3A proteins or genes, are useful for treating epilepsy concernive activities. AAH55763 to AAH56164 and AAB99674 to AAB99679 cc invention strikes and proteins given in the exemplification of the present CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
Determining a predisposition to epilepsy and/or development of epilepsy comprises determining the genotype of SCN1A, SCN2A and/or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

SCNIA, SCN2A and SCN3A are all sodium CC epilepsy (IGE) gene is more specifically localised on chromosome 2. The idiopathic generalised CC q31. Compounds identified as modulators of the biological activity of SCNIA, SCN2A proteins or genes, are useful for treating epilepsy CC neuroprotective activities. AMIS5763 to AMIS6164 and AMB99674 to AMB99679 CC cligonucleotides and proteins given in the exemplification of the present CCNIA, SCN2A, and SCN3A CDNAS, gene fragments, PCR primers, CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                       This invention relates to a human polynucleotide which is complementary to an mRNA transcribed from a "generalized epilepsy with febrile seizure plus" (GERS+)-related gene. The gene is useful for diagnosing GEFS+. The present sequence represents the human GEFS+ protein sequence with SCN2A
Sequence 2005 AA;

                                                  The invention relates to a novel method for identifying a subject predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA cc derived from the subject has any of 134 nucleotide sequences. The method cof the invention has nootropic, neuroprotective, inotropic, antipyretic, cantiarrhythmic, antimigraine, antidepressant, antiparkinsonian, comparison to the invention acts as an comparison to the invention acts as an comparison of the invention acts and comparison of the invention of the invention of the i

N-PSDB;
The invention relates to a novel method for identifying a subject predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a CDNA derived from the subject has any of 134 nucleotide sequences. The method of the invention has nootropic, neuroprotective, inotropic, antipyretic, neuroleptic, tranquiliser, antipersesant, antiparkinsonian, neuroleptic, tranquiliser, analgesic, nephrotropic, antidiabetic, and ophthalmological activity. A polynucleotide of the invention acts as an ion channel agonist, or ion channel antagonist. The methods, isolated
                                                                                                                                                                                                                                                                                                                                                                                   Identifying predisposition to an ion channel dysfunction, such periodic paralysis, cardiac arrhythmias, migraine, Alzheimer's schizophrenia, anxiety and depression, by detecting encoding-ge mutation events.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dent's disease, hyperinsulinaemic hypoglycaemia of infancy, cystic fibrosis, congenital stationary night blindness and total colour blindness. The present sequence represent a mutant protein of the invention. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.
                                                                                                                                                                                                                                                                                                                            Claim 13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mulley JC,

                         The present invention describes a method (M1) of determining an individual's predisposition to epilepsy and/or development of epilepsy, as well as predicting the individual's response to medication. The method comprises determining the genotype of at least one gene selected from SCN1A, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium. SCN1A, SCN2A and SCN3A are all sodium channel genes located on chromosome 2. The idiopathic generalised epilepsy (IGB) gene is more specifically localised on chromosome 2q3-q31. Compounds identified as modulators of the biological activity of SCN1A, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvalsant and neuroprotective activities. AMH55763 cDNAA, gene fragments, PCR primers, oligonucleotides and proteins given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for diagnosing or prognosticating a neurodegenerative disease in a subject, or determining whether a subject is at increased risk of developing the disease. The method comprises detecting the level and/or activity of a transcription or translation product of the gene coding for the voltage-gated ion channel SCN2A. The modulator of an activity and/or of a level of at least one substance is useful for preparing a composition for treating or preventing a neurodegenerative disease, in particular Alzheimer's disease. The current sequence represents the human SCN2A amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 96-104; 268pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining a predisposition to epilepsy and/or development of epilepsy comprises determining the genotype of SCN1A, SCN2A and/or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rouleau
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-NOV-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-NOV-2000; 2000WO-CA001404

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8X
cc gene expression patterns. Sequences derived from regions adjacent to the cintron/exon boundaries of NHP gene can be used to design primers for use in the mplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NHP conclectide sequences are useful for drug screening effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body, and nucleotide constructs encoding NHP products are useful to genetically engineer host cells to express NHP products in vivo. These genetically engineers function as the body of a NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful and the products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP products in vivo. NHP nucleotide sequences may also be used as part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is novel human protein (NHP), ion channel protein. NHP share structural similarity with mammalian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for screening, diagnosis and in gene therapy of biological disorces.

The invention relates to a nucleic acid molecule encoding a mutant alpha cubunit of a mammalian voltage-gated sodium channel. The DNA and the polypeptide may be used in the diagnosts of epilepsy, in particular generalised epilepsy with febrile seizures plus, and other disorders cascociated with sodium channel dysfunction. The polypeptide is useful for the screening techniques are employed. The sequences are also useful in the cubunfacture of a medicament for the treatment of a disorder associated with sodium channel dysfunction such as epilepsy, particularly cube with sodium channel dysfunction such as epilepsy, particularly cube mysathenia, episodic atexia, neuropathic and inflammatory pain, cubardiner's disease, Parkinson's disease, Schizophrenia, hyperekphexia and mysteonias. Sequences ABG69289-ABG69293 represent human sodium channel capha 1-subunit (SCNIA) polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 25

C; Comment: This membrane glycoprotein mediates the voltage-dependent sodium-ion permeable comment: This sequence contains four highly homologous internal repeats (excluding resident repeat has a similar overall structure containing six subregions located in identification and permeating units are thought to be oriented pseudosymmetrically across. The presence of four homologous structures within this molecule is consistent with the presence of four homologous structures within this molecule is consistent with the presence of four homologous structures within this molecule is consistent with the positive of the presence of sequence of the presence of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         I, Recept. DoMain: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,S2,S3,S5,S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and ar characterized by a series of positively charged amino acids at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C. Natl. Acad. Sci. U.S.A. 88:335-339(1991).

FUNCTION: Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient. SUBUNIT: The sodium channel consists of a large polypeptide and 2-3 smaller ones. This sequence represents a large polypeptide. SUBCELLULAR LOCATION: Integral membrane protein.

Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions may pass in accordance with their electrochemical gradient.

-ISUBNUT: The sodium channel consists of a large polypeptide and 2-smaller ones. This sequence represents a large polypeptide.

-ISUBCELLULAR LOCATION: Integral membrane protein.
-IDOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charged characterized by a series of positively charged amino acids at every third position.

-ISUMILARITY: Contains to the sodium channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
